KNITTING INSTRUCTIONS

Before you begin knitting...

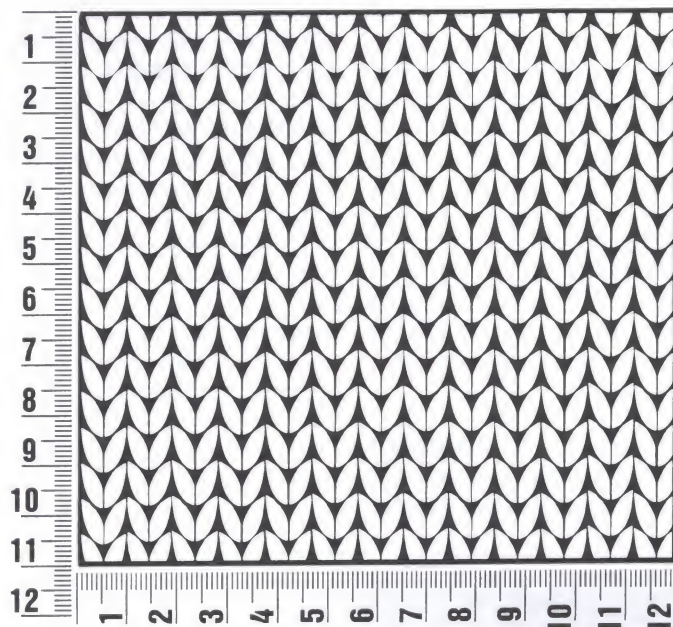

...make a gauge swatch. Use the recommended needles, yarns and pattern stitch for your gauge swatch. It should measure approx. 4 3/4" x 4 3/4" [12 cm x 12 cm]. Cast on and bind off rows, as well as selvaige stitches should not be included in the measurement. Pin your swatch and block with a damp towel as you would the finished pieces of the garment. Count stitches and rows over 4" [10 cm].

- If you have too many stitches and rows, switch to larger needles.
 - If you have too few stitches and rows, switch to smaller needles.
- Always work your gauge swatch in the pattern stitch given in the instructions.

IMPORTANT NOTES ABOUT FELTING WOOL

Felting wool is a pure natural product. Because of this the characteristics and the felting ability might deviate. There are several reasons for this:

1) Product-related reasons
Between large contingents of raw wool – the base material for production – there can be some discrepancy in the quality. These discrepancies influence directly the felting behavior of the end product. Also, the intensity of the respective color can impact the shrinking-characteristics during felting. Light colors tend to shrink more than dark colors.
Finally certain effects also influence the felting characteristics. For the production of certain effects (i.e. heather) the wool needs to be dyed before spinning. For other effects pressure is applied to the already spun thread; through this the density and the volume of the yarn (thinner/thicker) changes which is reflected directly in the felting behavior.

2) Washing-related reasons
During washing in the machine numerous factors affect the knitted piece and can influence the felting behavior. Aside from the model, the washing powder and the temperature are crucial.

3) Different kinds of knitting
Everybody knits differently and so all the knitted pieces have a different mesh struc-

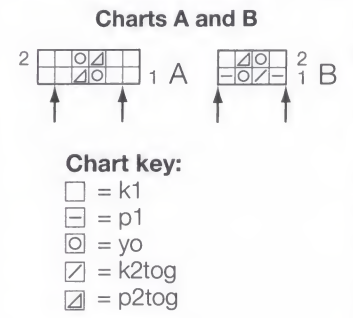

ture. Loosely knitted pieces shrink more during washing than more tightly knitted pieces. This is why stated standardized tables can only offer averages and benchmarks while in reality due to the above mentioned elements the results can deviate from them.

Due to all these mentioned factors, it is necessary to make a swatch and measure it before felting, then felt the swatch in the washing machine. Wash at 40° C (104° F) at normal program with spin cycle – do not choose energy or short wash program. Wash with 2 color-fast towels and a pair of hand towels to fill the machine, but not quite full, for agitation. If desired, add 1 to 2 tennis balls to achieve a better rolling effect. The more friction and combination of warm water the quicker and better the felting process.

GAUGE

Always knit a large Gauge swatch using the yarn and suggested needle size given in the instructions. The swatch, before felting, should be larger than 10 x 10 cm/ 4 x 4". Cast on at least 25 – 30 stitches and knit for about 40 rows. Count the number of stitches and rows over then center 10 x 10 cm/ 4 x 4" and contrasting color yarn markers to mark this area. Then after washing and felting the swatch, you will know your gauge after felting.

sleeves measures 7 3/4 (8 1/4, 8 3/4)" [20 (21, 22) cm] from beg. Shape neck: work in pat as established across row and at same time, sl center 38 sts to holder. On foll

row, work in pat as established across row and at same time, cast on 38 sts over bound-off sts. Next, work back same as for front, binding off to shape sleeves. When same length as front, bind off all sts loosely.
Finishing: pin piece to measurements and block with damp towels. Sew side and sleeve seams. Sl 38 held front neck sts from holder to circular needle and pick up and k 38 sts along back neck edge – 76 sts. Join for working in rnds and work in lace pat according to chart B for 6 3/4" [17 cm]. Bind off all sts loosely.
